

HUMANITY IN TRANSITION

MHS 75th Anniversary Academic Symposium

Ideas. Inquiry. Innovation.

5 November 2026 | Modern High School for Girls, Kolkata

As Modern High School for Girls celebrates seventy-five years of education, we invite students of **Classes 11 and 12** from participating schools to join an academic symposium exploring questions that will shape our shared future.

Humanity in Transition examines how technology, ideas and enterprise are changing the ways we live, think, work and the responsibilities these changes bring.

The Symposium will comprise two complementary segments united by an emphasis on intellectual curiosity, rigorous inquiry and thoughtful engagement.

Segment 1. Research, Technology & Society

This segment is deliberately non-competitive and students are invited to develop research-based thesis papers through two tracks. Selection will provide a platform for substantive academic exchange, with no ranking of papers or declaration of winners.

Track A - Technical Research: Cybersecurity and Digital Infrastructure

Students will identify a real-world problem, investigate it through research and analysis, and propose credible solutions.

Certification by **Techno India University**.

Track B - Interdisciplinary Research: Technology and Society

Students will examine technology through another disciplinary lens. Areas of inquiry may include artificial intelligence, privacy, surveillance, trust and ethics, drawing on perspectives from history, philosophy and the social sciences.

Certification by **CSIR-IICB** (CSIR-Indian Institute of Chemical Biology).

Six technical and six interdisciplinary papers will be selected for presentation at the Symposium.

Segment 2. From Idea to Enterprise: Business Product Pitch

This segment will be competitive and it challenges students to turn an idea into a **viable, responsible and scalable enterprise**. Students working in teams will develop a concept from **problem to product to enterprise**. They may present a new venture or substantially advance an idea previously explored at a school exhibition, fest or competition centred on the themes of the **Circular Economy** and the **Gig Economy**.

Post first round of screening, **six teams** will be shortlisted for the final on-stage presentations. These will be judged by a panel of **entrepreneurs, start-up founders and professionals with experience in developing and supporting new ventures**.

A Shared Culture of Inquiry

Both segments share a common intellectual process:

Question → Research → Analyse → Create → Test → Defend

In our seventy-fifth year, **Humanity in Transition** invites young researchers, innovators and aspiring entrepreneurs to explore, with imagination and rigour, how their ideas can shape our shared future.
